801.FG.029	

High-quality natural diamonds allow gentle and conservative tissue reduction, avoid splinters chipping out and sharp edges.

**JOTA values high-quality diamonds. Only in this way is the user guaranteed conservative tissue reduction. Immaculate raw material and constant monitoring are the prerequisite of high product quality.**

Constant monitoring allows manufacture of products with the best possible user characteristics. This in turn allows gentle and conservative tissue reduction and avoids splinters chipping out and sharp edges. The proven know-how of our galvanising process prevents diamonds breaking

out and guarantees a longer instrument lifespan. The vibration-free running of all JOTA instruments conserves handpieces and contra-angles.

### **Comprehensive selection – perfect service**

JOTA provides a comprehensive selection of shapes and grits. This means the user will find an instrument for every type of preparation. Perfect customer services rounds off the assortment.
